

Elite Transition-Rich Benchmark Concepts

Triangle central gate and sectors 3 basins

Local-linear cores plus one shared gate disk and angular exits.

Best clean follow-up to the current chart-switching positive.

Mechanism

clean chart-switching positive

Tier / stage

Elite / Anchor

Calibration

Low tuning risk

Tags: control, shared region

Four-way crossroads 4 basins

Orthogonal bottleneck corridors force rerouting at a single crossing.

Easiest explicit transfer geometry to explain in one figure.

Mechanism

explicit bottleneck transfer

Tier / stage

Elite / Anchor

Calibration

Low tuning risk

Tags: control, routing, shared region

Sector relay-4 4 basins

Four stable affine sectors with one explicit transition strip.

Strong piecewise-affine positive control for local charts.

Mechanism

piecewise-affine positive control

Tier / stage

Elite / Anchor

Calibration

Moderate tuning risk

Tags: control, piecewise

Rotating barrier-4 4 basins

Barrier orientation twists with radius, moving the effective separatrix.

Best moving-boundary stress test in the inventory.

Mechanism

moving-separatrix stress test

Tier / stage

Elite / Hard stress

Calibration

Elevated tuning risk

Tags: moving boundary, warped geometry

Lens-warp triad 3 basins

A smooth coordinate lens bends trajectories through a warped strip.

Separates visible geometry from transport geometry cleanly.

Mechanism

warped-geometry positive

Tier / stage

Elite / Geometry

Calibration

Moderate tuning risk

Tags: warped geometry

Braided diamond4 4 basins

Two saddles braid their manifolds before capture into four sinks.

Gives real route choice without relying on a hub.

Mechanism

route-choice topology benchmark

Tier / stage

Elite / Routing

Calibration

Elevated tuning risk

Tags: routing, multistage

Twin pinch bowtie 4 basins

Two sequential pinch regions create a staged slow-fast routing web.

Stronger two-stage transition story than a single bottleneck.

Mechanism

two-stage slow-fast routing benchmark

Tier / stage

Elite / Hard stress

Calibration

Elevated tuning risk

Tags: slow fast, multistage

Arc DAG4 4 basins

Curved separatrix arcs encode a directed acyclic transition graph.

Cleanest causal routing story for coauthor-facing discussion.

Mechanism

directed acyclic transition-graph benchmark

Tier / stage

Elite / Routing

Calibration

Moderate tuning risk

Tags: routing, causal graph
