

Claude Catalog Audit: Combined Screening Coverage, Acceptance Tiers, and Remaining Queue

Best Screened Systems So Far

| system                 | B | C     | occ   | interpretation                                          |
|------------------------|---|-------|-------|---------------------------------------------------------|
| hybrid_state_dep_rot_5 | 3 | 0.460 | 0.220 | accepted; every basin stays in the strict crossing band |
| transition_routes_4    | 4 | 0.430 | 0.200 | accepted; every basin stays in the strict crossing band |
| cal_triangle_3         | 3 | 0.500 | 0.260 | accepted; every basin stays in the strict crossing band |
| var_depth_gradient_4   | 4 | 0.400 | 0.200 | accepted; every basin stays in the strict crossing band |
| cal_pentagon_5         | 5 | 0.500 | 0.170 | accepted; every basin stays in the strict crossing band |
| var_l_shape_5          | 5 | 0.510 | 0.120 | accepted; every basin stays in the strict crossing band |
| cal_asymmetric_3       | 3 | 0.530 | 0.280 | accepted; every basin stays in the strict crossing band |
| var_diamond_4          | 4 | 0.610 | 0.230 | accepted; every basin stays in the strict crossing band |

Recommended Next-Screen Queue From The Unscreened Backlog

| system                    | track   | why now                                                                                        |
|---------------------------|---------|------------------------------------------------------------------------------------------------|
| var_mixed_widths_5        | variant | width heterogeneity is a cleaner next variant than another geometric rearrangement             |
| var_grid_2x2              | variant | simple grid topology can clarify whether failures are geometric or purely tuning-driven        |
| var_random_4a             | variant | compact non-symmetric 4-basin variant worth checking after the stronger 5-basin random failure |
| var_voronoi_basins        | hybrid  | interesting boundary-shape benchmark where geometry and routing should diverge                 |
| hybrid_rotating_centers_3 | hybrid  | rotational preference benchmark that could be cleaner than the slow-fast candidates            |
